

Spring Market Crops

FOR COMMERCIAL VEGETABLE & FLOWER GROWERS.

Notes and Trial Ground Observations together with Current Prices

In spite of the troubles and anxieties which beset the world, the more important services to the community must go on, and one of the most essential of these is the production and distribution of necessary food supplies. The market gardening industry is now, as always, of the greatest national importance, and to carry on is surely a prime duty.

Our Trial Ground work and our seed selection and seed production activities are being intensified, and we are already in the way of producing in Australia a greater proportion of our wants than at any previous time.

For the most part present supplies are about sufficient for present requirements, but we must point out that all printed prices, under existing circumstances, are necessarily subject to change without notice, and also that if stocks of some important varieties run short, then we shall do our best to spread such supplies over the greatest number of customers.

IF THERE IS ANY FURTHER INFORMATION YOU REQUIRE, PLEASE ASK US—WE ARE AT YOUR SERVICE.

BEET

DERWENT GLOBE.—A splendid strain of the Crimson Globe type which, because of our careful maintenance of quality in the breeding, is a leading variety on all markets. It cannot be compared with Early Wonder for outside appearance, but for interior texture and deep colour, no strain of Early Wonder can ever be as good as "Yates' Derwent Globe." On the Melbourne Market buyers invariably ask are they "Yates' Derwent Globe."

EARLY WONDER.—A little earlier than Derwent Globe, and a shade later than the Egyptian Turnip Rooted. The strong upright tops and smooth outside appearance of the roots are much favoured on the Sydney Market. We have done a great deal of careful re-selection work on this variety, and our strain is now regarded as one of the very best offering.

TURNIP ROOTED.—One-time favourite of all markets, and still valued where particular earliness is required or its shape is still popular.

OBELISK.—A half long cylindrical Beet of good flesh, quality and colour, and because of its shape bunches well, but should not be grown where the market demands the more conventional shapes.

GREEN TOP BUNCHING.—This is a new Beet developed especially for the bunch trade, having globular roots of unusually attractive outside appearance, being smooth and well coloured. Worth a trial.

CARROT

There is no more important market crop, and naturally we are giving constant attention to the quality of our strains. Our sales of seed to market growers have greatly increased in the last few years, confirming our belief that our strains are the best in Australia.

CHANTENAY (RED CORED).—This is the leading market carrot in all districts. It is so well known to growers everywhere that we feel there is no need to make special mention of its quality. Supplies are, however, now exhausted until December. We recommend Danvers Half Long as a substitute.

DANVERS HALF LONG.—Resembles Chantenay, but is a shade longer with a more pointed root. It is of excellent quality, but not quite so good as Chantenay. However, the tops are more vigorous, and we confidently recommend it to growers as a substitute for either Chantenay or Long Intermediate, both of which are temporarily out of stock.

LONG INTERMEDIATE (ST. VALERY).—The old favourite long carrot, and it does particularly well in deep loamy soil. Supplies are now exhausted until December. We recommend Danvers Half Long as a substitute.

CUCUMBER

YATES' CRISTAL APPLE.—Originally introduced by Yates and now undoubtedly the leader of this class. Our crop is produced each year from specially selected stock seed.

EARLY FORTUNE.—Regarded as the best medium-sized long green type. Popular on most markets, and is recognised superior to the older White Spine strain.

KIRBY STAYGREEN (SHORT GREEN).—Earliest of this class with short rather blocky fruit but of good dark green colour. Recommended where earliness is an advantage.

LONG GREEN.—A finely-bred Cucumber of unusual length (twelve inches or more) with smooth dark green skin. Later maturing than Early Fortune and a heavy cropper.

BEANS AND PEAS

Beans and Peas are two of the most important crops the market gardener can grow. While comparatively cheap to grow for the man who goes in for intense cultivation, they are great soil renovators, so that they should be included in the rotation, particularly on land used for root crops, cabbages, cauliflowers, etc.

The main variety of Beans grown to-day is Brown Beauty. They are hardy, a good cropper, and a general favourite, but, to our mind, in many situations Yates' Canadian Wonder will

give an even heavier yield. Tweed Wonder, which is a Departmental selection of Canadian, gives excellent results, particularly on the Coastal areas.

A comparatively new variety, Hawkesbury Wonder, is now available in quantity and will, we think, become prime favourite with the market gardener. In our trials it is a heavier yielder than Brown Beauty, very free of disease, and the pods short and sell very well on the market, being very good-looking. Other varieties listed all have merit, particularly for certain districts.

With Garden Peas the two prime favourites are Yates' Earlicrop and Greenfeast. In spring the main plantings are usually made with Greenfeast, but Yates' Earlicrop is a prime favourite and the postal order sell very well in the summer crop. Owing to variations in market value it is not possible to quote prices of Beans and Peas in this issue, but Yates' Price List is issued about the first of each month and special quotations will gladly be given on request. Please note that all Peas and Beans are offered net f.o.r. or f.o.b. Sydney, freight extra.

PLEASE NOTE.

All prices quoted and offers made in this List are subject to withdrawal or alteration without notice.

LETTUCE

IMPERIAL 847.—This Lettuce has jumped into favour in an unprecedented manner. It is a black seeded Lettuce of vigorous growth, and makes a very solid head of great size. It does remarkably well during the Summer weather and some growers are even using it for cool season growing, although in this respect we recommend Imperial D or Imperial 615 for preference.

IMPERIAL D.—This and Imperial 615 are classed as Winter types and are used in sowings made from about February to the end of July, or even later in cool districts. For this time of the year it has been proved that they succeed better than Imperial 847.

IMPERIAL 615.—This is a newer development than Imperial D, and we are inclined to think it may be better liked, especially in districts with mild winters. It is not quite so dark a green as Imperial D, and not quite as heavy in the stem and leaf texture.

NEW YORK SPECIAL (NEAPOLITAN).—This is a very refined strain, generally of better eating quality than the Imperials, which are larger and inclined to coarseness. It may be grown in a wide range of climates and conditions, except perhaps hot difficult periods of the year.

FOR HOT, DIFFICULT CLIMATES.—For summer heating in warm northern districts and semi-tropical climates, we do not advise any of the New York or Imperial sorts. More success will be had from the varieties Iceberg, American Summer, Mignonette and Green Mignonette.

ROCK MELON

HALES BEST, MILDEW RESISTANT No. 45.—Although developed primarily for mildew resistance, this strain has lost nothing in quality and appearance, and has the added merit that it can be almost fully ripened on the vine and still be picked and sent to Market without going soft. We now recommend it in preference to the older strain of Hales Best.

ROCKY FORD.—A much smaller Melon than Hales Best but heavily netted, solid and a first-class carrier. In addition the flesh is of superb eating quality though green in colour. In season it is a little later than Hales Best.

YATES' SURPRISE.—Where a larger Melon is required this is an excellent choice. For a Melon of this size it is quite early, although a little later than Hales Best and Rocky Ford. It has a thick salmon flesh of excellent flavour.

HACKENSACK EARLY.—An old favourite,

but in our opinion should give place to Hales Best.

HONEY DEW.—One of the Casaba or winter-keeping sorts that requires a very long growing season. The outside colour is white with very faint netting, and the green flesh is tender and well flavoured. This melon is an excellent carrier and is largely used by ship providers.

WATER MELON

EARLY YATES.—By far the earliest maturing Melon, ripening its first fruit a month earlier than Kleckley Sweets and Sugarstick. It is a medium-sized Melon with a light green skin with faint dark green markings, which make it very attractive to buyers, and when cut displays a solid deep red flesh. It is a remarkably heavy cropper and well recommended where earliness is essential.

YATES' MARKET WONDER.—The standard maincrop Melon both for home and market gardens, and one of the very best we list. It is an oblong Melon with a dark green skin and deep red flesh.

KLECKLEY SWEETS.—Very similar to Market Wonder in shape, size, and colour.

SUGARSTICK.—The most popular of the light skinned long Melons and very largely used in the Hawkesbury district of New South Wales.

HAWKESBURY WILT-RESISTANT.—This recently introduced strain is in most respects identical in appearance to Sugarstick, and it is a first-class sort with deep red thick flesh with very little white next to the rind. We urge all Sugarstick growers to try it, as we feel sure it will meet their requirements, and in addition has the merit of being wilt-resistant.

TOM WATSON.—An old favourite in some districts principally because of its very tough rind and exceptional carrying quality.

FLORIDA FAVOURITE.—Popular with some growers, and in our opinion a fine variety, although not such a good carrier as the above varieties.

KLONDIKE SPECIAL.—In our trials this has proved to be an outstanding Melon for eating quality. It is of medium size, light green in colour, with dark green stripes. The flavour and sugar content of Klondike Special are unsurpassed. However, we doubt if it will prove such a good carrier as some of the older varieties.

PARSNIP

HOLLOW CROWN (STUDENT).—This is the same strain as we have carried for years, being a refined white root, smooth skinned, and free from side rootlets. In addition, the interior quality is excellent, with very little core.

HOLLOW CROWN (TRUE VICTORIAN MARKET TYPE).—This is the same type as used by nearly all market growers in and around Melbourne. It has a noticeably deeper hollow in the crown and will probably produce on the average a slightly larger root.

RED STALK.—This selection developed for the winter bunching trade, and very popular on the Sydney market during the Winter months of the year. It has a remarkably strong heavy top, with large coarse roots, although by careful selection work we are overcoming this latter disadvantage.

PUMPKINS

We feel that we should make some special mention of the exhaustive re-selection work which we are doing on the Table Pumpkins we have to offer, particularly Queensland Blue and Triamble. While we have always carefully rogued our seed crops to maintain type, we have, during the past few years, set out on a definite plan to produce seed of a strain which will yield just the sort of Pumpkins the market wants.

YATES' QUEENSLAND BLUE.—Our improved strain of this variety will, we are confident, give complete satisfaction. We have eliminated all poor shapes, light skinned colours, those which have too big a crown and those which have a soft rind, indicating poor keeping qualities. Moreover, we have paid very strict

attention to see that seed has been saved only from Pumpkins not showing any trace of Bone. We regard our Yates' Queensland Blue (re-selected strain) as the finest market Pumpkin for all general use.

YATES' TRIANGLE.—We have been carefully selecting this strain for some seasons, and we feel that the phenomenally heavy demand experienced last year is ample proof that our growers are well pleased with the strain. The main demand for this comes from the Southern States.

SELECT CROWN.—While we are not by any means satisfied with the strain we are offering, we believe it will compare more than favourably with other strains offering. We are now working on a newer strain, which we hope to introduce on the market next year, and which we are confident will show a vast improvement.

GRAMMA OR TROMBONE.—An excellent strain of the true Trombone or Horseshoe type.

TURK'S CAP (LOW CROWN).—This early maturing type of Pumpkin is grown only in Victoria and similar cool climates, where the season is a little too short for the more desirable later maturing kinds.

MIXED CATTLE PUMPKIN.—We have a really excellent strain of the large grey Cattle Pumpkin, which under good growing conditions will reach 100 pounds or more in weight. With these we mix a proportion of the large round Gramma, etc., which has a good food value, and some other kinds, and we believe that the mixture in general will give the utmost satisfaction.

SQUASH

The term "Squash" covers two quite distinct classes, both of which are valuable for different purposes.

LATE MATURING HARD SHELLED GROUP.—In this class are the Hubbard Squashes which are finding an increased sale in the vegetable markets, the most popular varieties being Green Hubbard, Warty Hubbard, and the Golden Hubbard.

EARLY MATURING SOFT SHELLED GROUP WITH MARROW-LIKE FLESH.—These have to compete with Marrows and there is no doubt that the Marrows are the more popular. Coming under the above heading are Early White Bush,

Early Golden Bush, and Custard Marrow, which is a giant strain of the Early Golden Bush. Seed of the latter will not be available this Spring, but we hope to have supplies to offer next year.

MARROWS

The Long White Fruited Bush Marrow is well known to all growers of market vegetables, and is by far the most popular of all varieties.

TOMATO

The range of good Tomato varieties available is now so large that it would be unwise for us to make individual recommendations with too much emphasis. So much depends on differences of climate, exact growing conditions, season when grown, available markets, type of tomato wanted in those markets, and other such variable factors; therefore, local experience and results are of the greatest value, and always should be taken into account.

YATES' EARLIWINNER.—Earliest of all small market Tomatoes, has few seed cells, and therefore, very weighty fruits of deep rich red colour and excellent flavour.

EARLIANA.—Coming in just after Yates' Earliwinner, an excellent type either as a ground crop or for staking.

AUSTRALIAN EARLIANA.—Selected locally and is more vigorous than the above-mentioned, and is well liked by some planters.

MARVANA.—A smaller type than the above-mentioned, but a very hardy sort, and therefore resistant to Fusarium Wilt. Very popular variety in Queensland.

RED MARHIO.—A local selection introduced by the Department of Agriculture and recommended for North Coast conditions. Resistant to Fusarium Wilt. In general characteristics is similar to Break O'Day except perhaps a few days later in maturing.

BONNY BEST.—More refined fruit than either of the above, with a better and more uniform shape and better colour. Size, however, is smaller and vine less vigorous. It is not classed as Wilt-resistant.

CHALK'S EARLY JEWEL.—Rather like Bonny Best, medium-sized fruit, not Wilt-resistant.

BURWOOD PRIZE.—A very old variety with medium-sized smooth fruit. Still widely used,

but not resistant to Wilt.

NOTE.—The above are classed as Early and Second Early varieties and normally ripen their first fruit ten to twenty days before the following, which are usually called maincrop sorts.

MARGLOBE.—An excellent sort which continues to hold its popularity. Is resistant to Fusarium Wilt but liable to "Star Crack" under certain conditions.

PRITCHARD.—Does well inland, and also as a late crop on the coast. Resistant to Fusarium Wilt and has a decided tendency to "Star Crack" than Marglobe.

DEVLIN'S CHOICE.—Introduced by us some couple of years ago, and has proved a very popular variety wherever grown. Fruit are of better colour than Break O'Day or Red Marhio, and are of good size and very solid. Well worth a trial in any district.

YATES' IMPROVED STONE (also known as **Norfolk or Matchless**).—A very late maturing variety and grown only for a late crop. Excellent carriers and resistant to Fusarium Wilt.

The so-called Chinese varieties are a very important group for large area cultivation without staking in the cooler southern parts of Australia.

SOUTH AUSTRALIAN EARLY DWARF RED.—Our strain grown and selected on our Tasmanian Seed Farm, is finding much favour, having been carefully selected for smoothness of fruit.

BURWOOD WONDER.—Very similar to the above in most respects.

AUSTRALIAN LARGE RED.—Fruits are larger than the above varieties, but on the average hardly so smooth.

In the Smaller or English Cluster types are the following:

RECRUIT.—Well known on the Sydney market.

PROSPERITY.—Our own special introduction and in our opinion one of the very best of this type that we have yet seen, but owing to unfavourable weather conditions we will only have a very small quantity of seed to offer for this Season.

POTENTATE.—Only quite a recent introduction, but has proved very popular with growers in various districts, particularly in the County of Cumberland. It is said to be the earliest of its class, and it produces large clusters of good quality fruit.

FLOWER SEEDS - BULK PRICES POST FREE

For meaning of daggers (†) and dashes (—) in price columns, see special note at top of page 3 in reference to Prices and Quantity Rates. Commercial Flower Growers will not be thinking of their requirements for early Spring Sowing, and in this issue we have included some of the more popular lines that we can supply in bulk quantities.

Telegrams: "Seedsman," Sydney.

Yates' CURRENT Price List

GARDEN SEED SECTION

MINIMUM ORDER, 1/- PER ITEM.

We do not accept orders by weight for less than 1/- per item.

CARRIAGE FREE.

We send bulk Vegetable and Flower Seeds carriage free (by cheapest route). Carriage is charged extra on Beans, Peas, Roots, and Mushroom Spawn, or where goods are sent on customer's instructions by other than cheapest route. Delivery is made in Sydney when properly consigned at the Post Office, Railway or Shipping Wharf.

TERMS OF PAYMENT.

Where supplies are obtained through any Yates' Distributors terms are as quoted by them. In all transactions direct with us our terms are net cash with order (including freight where chargeable) except where customer has an approved account with us or when a satisfactory Sydney business reference is given when ordering, in which case payment is due on receipt of invoice. When remitting please keep a record of the numbers of any postal notes sent and do not include notes or coins except in registered letters. Country cheques should include exchange.

SUBSTITUTING.

On account of the difficulty in obtaining full supplies of many lines, and the failures of crops of others, we may, if unable to supply the exact variety ordered, substitute for it some other variety of a similar nature, which will, in our opinion, give satisfactory results. If this is not desired, please mark order clearly: "DO NOT SUBSTITUTE."

CONDITIONS OF SALE AND NON-WARRANTY.

We believe that all Seeds Bulbs and Roots sold by us are of the description and kind specified by us at the time of sale but owing to the practical impossibility in many cases of being certain of this we give no undertaking that such Seeds Bulbs and Roots will correspond with the description under which they are sold and we make all sales subject to this condition. We further give no warranty expressed or implied as to their growth description quality or productiveness and will not be in any way responsible for the crop. If the purchaser does not accept the goods sold to him on these terms they are at once to be returned to us and any money paid to us will be refunded.

ARTHUR YATES & CO. PTY. LTD.

PRICE CHANGES.

All prices are liable to change without notice. All quotations, whether by letter or printed price list, are subject to prior sale and prompt reply, otherwise to market fluctuations.

PRICES FOR LARGE QUANTITIES.

The reduced rates for large quantities apply only if the respective quantity is ordered at the one time. The sign (†) means we will usually quote a reduced price for that quantity. The sign (—) means temporary shortage of stocks and we are unable to supply in that or larger quantities; in such cases customers should write for further information and forward quotations.

VEGETABLE SEEDS — PRICE LIST

For meaning of daggers (†) and dashes (—) in price columns, see special note above in reference to Prices and Quantity Rates.

Customers will please note that we do not execute orders in bulk, i.e., by weight, to a value below 1/- per item of any one variety.

(See note top of this page.)
